A motivated, enthusiastic, and humble individual who is starting to find their feet in the world of Frontend Engineering. I've spent the past few months building up the foundations of my knowledge, diving into small projects, and now actively contributing at a startup. My interests lie not only in my learning, but also delivering valuable products in a fast-paced environment.

EDUCATION

CODECADEMY | Frontend Engineering Career Path

2021 - 2022

Undertook a thorough course which gave me a solid foundation in software engineering. The course took me all the way from the basics of HTML/CSS through to JavaScript, React, Redux, Jest, and much more.

UNIVERSITY OF SURREY | BSc International Business Management - 1st Class

2016 - 2020 | Guildford, Surrey

In-depth understanding of the theory, practice and technique of managing International Businesses with a focus on Marketing.

EXPERIENCE

SQUEEZE | Frontend Engineer

2022 – Present | Remote

- Implemented a React web application over a REST API to allow customers to manage their accounts, and remotely create and access their dashboards on Superset.
- Rolled out TypeScript and React Query in order to make the application more robust, maintainable and easier to understand for future developers.
- Designed and built a bespoke flow for new customers with a tailored journey in order to allow the company to start serving new customers without the need for a call.

ONEHEALTH COMMUNICATIONS | Account & Social Media Executive

2021 – 2022 | London/Remote

- Responsible for the management and delivery of concurrent projects across over 15 client accounts involving: translating briefs into actions across different internal teams, ensuring their outputs match expectations, and monitoring and reporting on their performance.
- Executed social media campaigns for a global client on LinkedIn and Google Ads. I also created commercial opportunities for our agency by introducing Twitter Ads as a revenue stream and a new automated reporting tool to increase internal efficiency and better showcase the value of our work to clients.

SANOFI UK | Communications & CSR Placement

2018 - 2019 | Guildford, Surrey

- Updated and managed the internal facing company website and communications channels throughout the UK and Ireland with bespoke written and visual content, whilst analysing employee engagement.
- Corporate Social Responsibility Lead: successfully organised and managed fundraising and volunteering projects in the company by achieving high employee engagement and increasing our donations from the previous year by 50%.

TECHNOLOGIES & PROJECTS

TECHNOLOGIES

- React
- React Query
- Redux
- TypeScript
- Git
- CSS

PROJECTS

- My Portfolio - my own React/TypeScript application, implemented more CSS for better UX.
- Randdit - my take on Reddit, using React/JavaScript/Redux over the Reddit API. This mobile-friendly app mimics Reddit's pages and allows the user to follow/unfollow, vote, and search subreddits.
- Zoopisa - based on the Zoopla and Google Maps API, written in React/JavaScript. This app will show available homes for sale in a list and on a map. House listing can be clicked on, revealing more details and possible similar houses for sale in the area.
